

RASMUSSEN “EASY” system pilots:

Rasmussen is offering a new and improved pilot system. In an attempt to make this as clear as possible this is how the set-up works:

You (or your customer) may purchase the SPK3E-N manual pilot. This operates the same as manual pilots have in the past. This is also the pilot on a manual Vent Free ALTERNA burners

You may then add an SE-UP1 kit to upgrade the pilot from manual to Remote Ready. This includes the solenoid, receiver and batteries. It does require the purchase and choice of the wireless transmitter devices. This does not need to be done at the time of sale; this is something that can be added at a later date.

THR-2R
On/Off w/
Thermostat

WS-2R
Wireless wall switch
On/Off

TS-2R
Wireless wall
Thermostat

WT-2R
Wireless 30/60/90
wall timer

Or add the RE-UP1 to change the Manual pilot to Variable Flame Height Remote Control. Includes motor drive, receiver, transmitter and receiver.

For sets burners that are 36” see through or larger and 42” and larger sets you will still need to use the RPK1 for the increased gas needs.
